1. INTRODUCTION

Technology has improved immensely in recent days. Improving the quality of one's life is an important benefit of technology in healthcare. Besides, it also reduces the burden of staff in the hospital and improves the health of the patient easily and efficiently. Hospital Management System is a digital platform that includes features of administration of the hospital. Our Hospital Management System aims to optimize the experience of medical professionals and patients by providing a seamless digital portal that minimizes the redundancies and bottlenecks of the traditional hospital management protocols. Main objective of our Hospital Management System is providing easy online access to users, immediate retrieval of information, no redundancy and immediate storage of information. This project is developed with the aim to decrease the work that is done manually at hospitals. Every single step is done with the help of system services such as doctor and patient registration, making appointments, prescribing patients, inquiries as well as complaints of customers. Hospital Management System will help in reducing lots of paperwork and file work which will allow easy management of hospitals. It will also provide all the latest information to the hospital administration and users wherever and whenever they need it. The interactions between the hospital and the patient is simplified using this system for the convenience of both sides.

2. SOFTWARE REQUIREMENT

FRONT END:

- HTML
- CSS
- JAVASCRIPT
- BOOTSTRAP
- JQUERY
- AJAX

BACKEND

- PHP

5. MODULES

- **LOGIN/ SIGN UP**

  The index page includes the login/sign up feature for each user.

  User sign up: User needs to enter full name, address, city, gender, email id for creation of an account. They need to create and confirm a password too. This password is stored in an encrypted form in the database.

  User login: Once a user account is created then the patient can login into their account using their username and password.

  User forgot password: User can reset their password by entering the name and email ID. Once the backend validates the user's credentials, the user can create a new password and confirm it.

  Doctor login: Registered doctors can login to the system by entering their email ID and password.

  Admin login: Admin can login into the system by entering their username and password.

- **MANAGE DOCTORS AND PATIENTS**

  Adding doctors: Admin can add new doctors to the system by entering their specialization, name of the doctor, clinic address, consultancy fees, contact no., email. Admin can create and confirm a password for the doctor to be added to the system.

  Manage doctors: Admin can view the details of the registered doctors such as ID, Specialization, doctor name and date of addition. Admin can edit and delete the details of registered doctors.

  Adding patient: Doctors can add patients by taking in their name, contact no., email ID, gender, address, age, medical history.

  Manage patient: Admin can view the details of the patients such as Patient ID, name, date of addition etc. The medical history entered by the doctor is visible to the admin in a tabular format.

Manage users: Admin can view the details of users who've created an account in the system. Admin can also delete the users from the database.

Patient search: Admin can search for the patients using their patient ID.

- **QUERIES**

Submitting queries: Users can submit their queries using the Contact Us page. The user has to enter their name, email ID, mobile no., and the description about the query.

Unread queries: Admin can check the submitted queries in the unread queries section and take action accordingly. Admin can acknowledge the query by adding their remarks.

Read queries: Admin can view the addressed queries and access the query details such as name of the person who submitted the query, email ID, admin remark and last updation date.

- **APPOINTMENT**

Making an appointment: Patients can login in into their account and make appointments. Patients need to select the doctor specialization, doctor name and date and time of appointment.

Checking appointments: Doctors can take actions for the appointments made by the patients in the manage patients section. Doctors can add the medical history and upload the prescription for the patient. The doctor can also update the medical history in the future, if needed.

Appointment history: Admins and doctors can both view the appointment details made by the patients in their respective portals.

- **ABOUT US/CHATBOT**

These pages provide assistance to the users and provide information about the hospital.

About Us: This page contains information about the services provided by our system such as finding doctors 24/7, booking an appointment anytime and anywhere and viewing the health records at your fingertips. It also redirects the users to the respective pages.

Visitors can also see the doctors information with different specializations without registering into the system from the about us page itself.

Chatbot: The chatbot simulates human-like conversations with the users. This allows users to comfortably communicate with the system and get their doubts clarified easily.
